

National Gear Repair, Inc. is pleased to announce successful completion of the Timken “Bearing Certified Maintenance Program”. We pursued this certification to PROVE that we adhere to the highest standards in bearing service.

We believe our certification helps **National Gear Repair, Inc.** to stand out as a facility that has a solid process and the appropriate equipment to ensure proper bearing maintenance.

Receiving this special certification is an on-going process, which includes:

- Rigorous pre-audit of our facility to document the quality of the processes and equipment in place to store, remove, install and maintain bearings conducted by Timken.
- On-site training of our Engineers by Timken.
- Post-training follow-up audits where improvements are approved and implemented.
- On-going and unannounced Timken audits, to ensure sustained quality standards and continuous improvement.

We will proudly display our banners as Timken Certified to show our Engineers and visitors that our Gear Reducer Rebuild meets the highest standards in the industry, for bearing maintenance.
